Wireless Channel: CompUSA to Sell ParkerVision SignalMAX Wireless Products

WIRELESS NEWS-3 September 2004-Wireless Channel: CompUSA to Sell ParkerVision SignalMAX Wireless Products (C)2004 10Meters - <http://www.10meters.com>

CompUSA, one of the nation's leading retailers and resellers of technology products and services, will sell ParkerVision's SignalMAX wireless networking products. SignalMAX said its wireless routers for use with cable and DSL modems, WLAN cards for notebooks, and USB adapters for PC desktops enable wireless networking and Internet connectivity without the distance and dead-zone limitations of conventional WiFi products.

SignalMAX products are based on ParkerVision's Direct2Data (D2D) wireless RF technology. CompUSA will also be selling SignalMAX products through their Business Services organization, which targets small and medium size businesses and the company's Web site.

"CompUSA is excited to offer ParkerVision's differentiated line of high quality wireless networking products for consumers seeking maximum performance," said Doug Lane, Networking Buyer for CompUSA. "We expect ParkerVision's one mile outdoor distance performance, guaranteed coverage of an entire home with no dead zones, and guarantee to improve the performance of any existing wireless network will be an attractive offering to our customers."
