

Title: TI IN RF Agreement With Parkervision.(Radar 3.12.2001)(Company Business and Marketing)(Brief Article)

Date: 3/12/2001; **Publication:** EBN; **Author:** Dunn, Darrell

Texas Instruments Inc. and ParkerVision, a Jacksonville, Fla., developer of direct-conversion RF devices, have agreed to jointly develop interfaces between TI's digital baseband chips for wireless handsets and ParkerVision's RF transceivers. As part of the agreement, TI, Dallas, will provide ParkerVision with foundry services, and has purchased 83,451 shares of ParkerVision stock, at a total value of about \$2.5 million. ParkerVision uses Direct2Data technology to create RF devices that eliminate the need for intermediate frequency circuitry used in most RF designs.
